
**Looking for
help to set
up laboratory
animal science
training?**

**we help you set up in
house animal training**

Incoming researchers require ready access to training before they can work with animals.

We offer a variety of e-learning solutions for animal facilities and institutions, which can be tailored to your specific needs and used to complement the training you deliver in-house.

covering the most commonly used species

Complete e-learning package for the theoretical component of functions A and D under Directive 2010/63/EU for the species mouse, rat, zebrafish and fish.

a complete e-learning package

Theoretical modules were prepared based on the European recommendations for the development of a common education and training framework under Directive 2010/63/EU.

assessment options

We provide online student assessment that can be purchased together with theoretical training packages. Assessment questions are elaborated by our instructors. The exam is run online and students will get their result immediately after submitting the exam.

up-to-date tools for interactive learning

We offer pedagogical support and student performance monitoring, using up-to-date tools for interactive e-learning and expert technical support.

content prepared by experienced instructors

All lecture content is prepared by experienced instructors, who also take part in the team behind our FELASA-accredited course - ref. 020/08F. This is one of the first courses to be accredited by FELASA and the team has trained more than (number F020/08) researchers since the start in 2005.

adapted to your needs

Tailored training solutions matching your institution's requirements. Training packages allow several combinations, with or without a practical component. International clients already use our training package on a regular basis and attest its quality.

what's function A and D, and why it matters

Directive 2010/63 article 23 – Competence of personnel:
The staff shall be adequately educated and trained
before they perform any of the following functions:

- A. carrying out procedures on animals;
- B. designing procedures and projects;
- C. taking care of animals
- D. killing animals.

Content in Portuguese and English

All lecture content is available in Portuguese and English
to respond to your needs.
